## 1. Application

These specifications are applicable to plasma monitors and communications control from external equipment.

"Please also support the command of VP series and refer to the manual of the conventional model about specification."

## 2. Connections

Connections should be made as described below.

### 2-1. Connector on the plasma monitor side: EXTERNAL CONTROL connector.

Type of connector: D-Sub 9-pin male

No.	Pin Name
1	No Connection
2	RXD (Receive data)
3	TXD (Transmit data)
4	DTR (DTE side ready)
5	GND
6	DSR (DCE side ready)
7	RTS (Ready to send)
8	CTS (Clear to send)
9	No Connection

### 2-2. Connector on the external equipment side: Serial port (RS-232C) connector.

See the specifications of the equipment that is to be connected for the type of connector and pin assignment.

### 2-3. Wiring

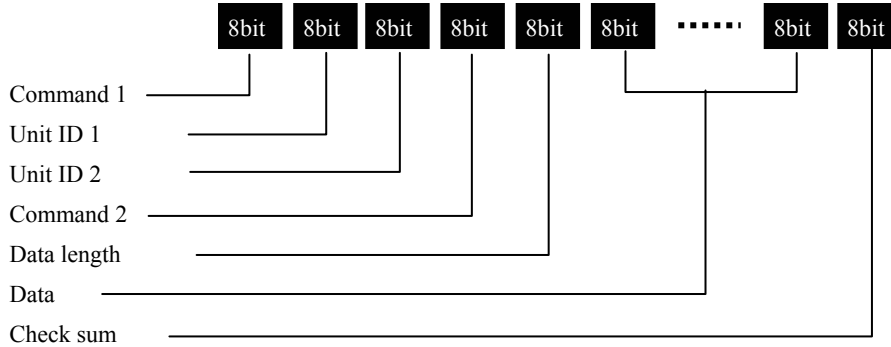

Use a crossed (reverse) cable.

Wire the cable so that each pair of data lines crosses between the two devices. These data line pairs are RXD (Receive data) and TXD (Transmit data), DTR (DTE side ready) and DSR (DCE side ready), and RTS (Ready to send) and CTS (Clear to send).

### 2-4. Communication Parameters

- |                          |              |
|--------------------------|--------------|
| (1) Communication system | Asynchronous |
| (2) Interface            | RS-232C      |
| (3) Baud rate            | 9600 bps     |
| (4) Data length          | 8 bits       |
| (5) Parity               | Odd          |
| (6) Stop bit             | 1 bit        |
| (7) Communication code   | Hex          |

### 3. Communication Format

#### 3-1. Command1

Command 1, along with command 2, is a number used to distinguish each command.

Bit1, Bit0: 11B or 10B : Usually, a form

In the case of ACK, when the lower order 4 bits is FH (as in 3FH and 7FH), this indicates that the commands and data of the supported equipment have been received. When the lower order 4 bits is BH (as in 3BH and 7BH), this indicates that unsupported commands and data have been received.

#### 3-2. Unit ID1,2 (UA1,UA2)

Unit ID 1 and unit ID 2 are numbers used to identify the equipment that is to be connected.

60H is used for the plasma monitor and 80H is used for external control equipment such as a personal computer.

#### 3-3. Command 2

Command 2, along with command 1, is a number used to distinguish each command.

#### 3-4. Check Sum (CKS), Error Processing, and ACK

1) The check sum described below and RS-232C odd parity are used together for a check of the received data. The check sum is the lower order 8 bits of one frame of sent or received data comprising the sum total of Command 1, Unit ID 1 and 2, Command 2, Data Length, and Data.

#### Check Sum Example

#### 2) Error Processing

- When the communication interval is vacant for more than 4 ms, thereafter a received Command 1 will be recognized. If, at this time, meaningful data cannot be recognized, that data will not be recognized (as valid data).
- An ACK will not be returned unless the receive data error, the check sum error, and the receive data are all taken in.

## 5. Command

### 5-1. Power ON

#### Function

The external control equipment switches on the power of the plasma monitor.

#### Transmission Data

9FH 80H 60H 4EH 00H CKS

#### ACK

The plasma monitor returns the following ACK when the power is switched on.

3FH 60H 80H 4EH 00H CKS

NOTE: Do not set the Power ON or Power OFF command continuously.

### 5-2. Power OFF

#### Function

The external control equipment switches off the power of the plasma monitor.

#### Transmission Data

9FH 80H 60H 4FH 00H CKS

#### ACK

The plasma monitor returns the following ACK when the power is switched off.

3FH 60H 80H 4FH 00H CKS

NOTE: Do not set the Power ON or Power OFF command continuously.

### 5-3. Input Switch Change

#### Function

The external control equipment switches the input of the plasma monitor.

#### Transmission Data
